

DBMS

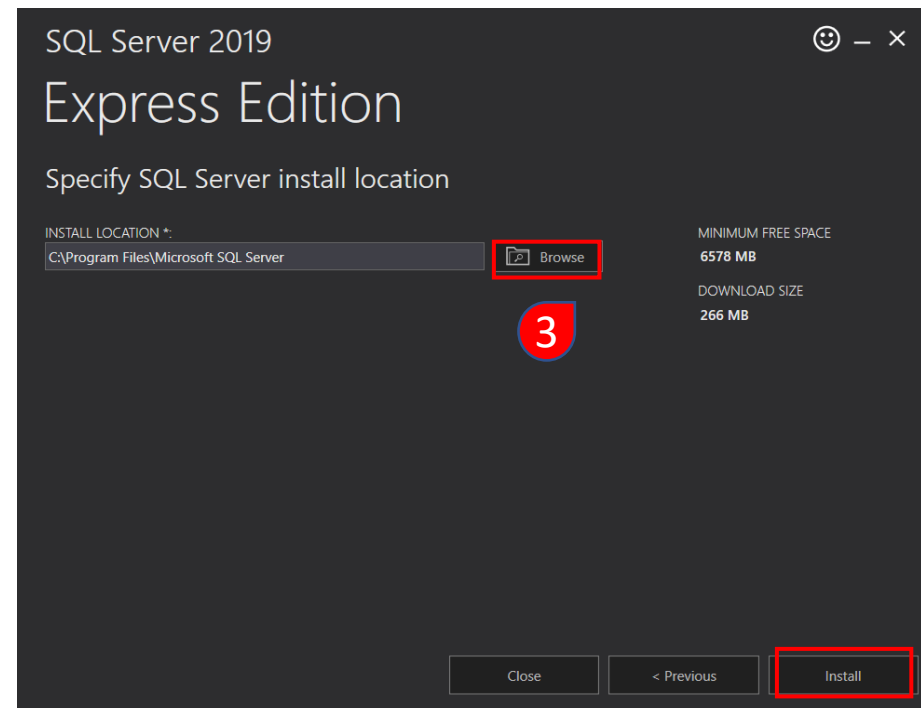

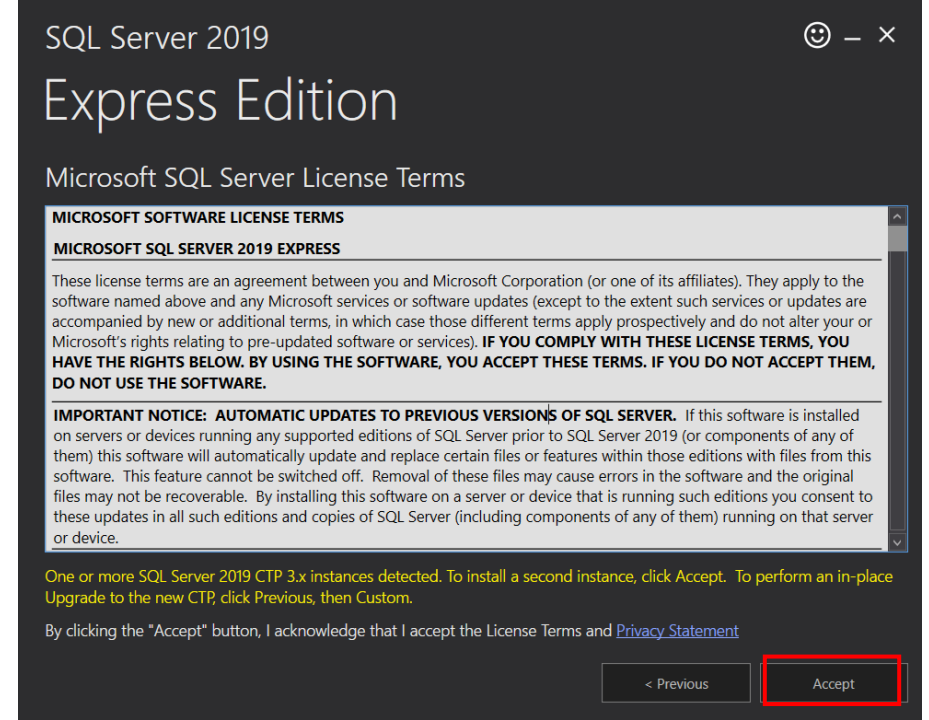

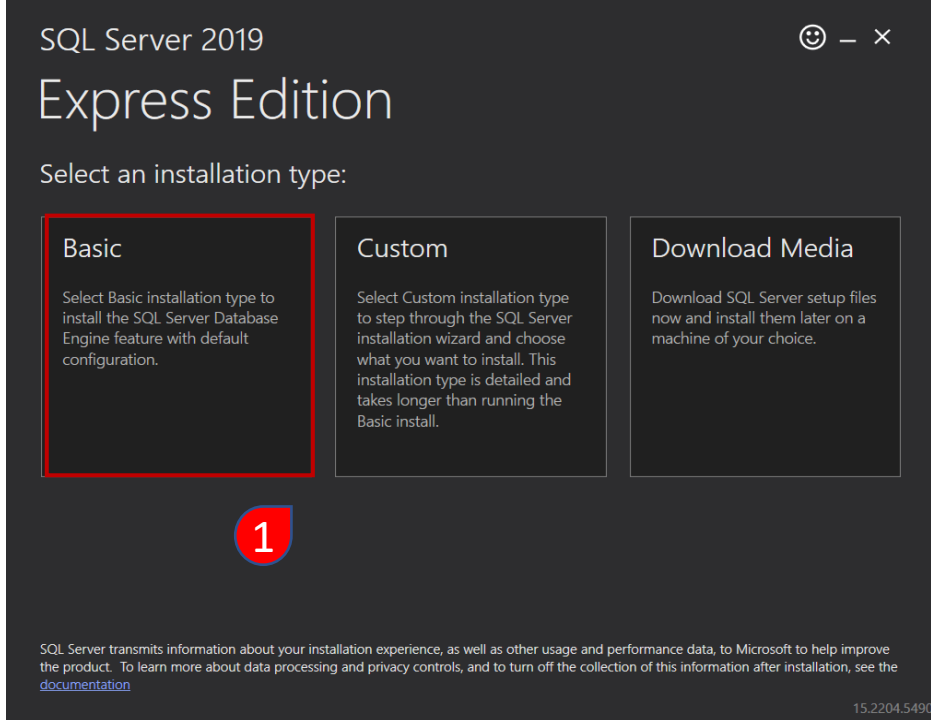

Introduction

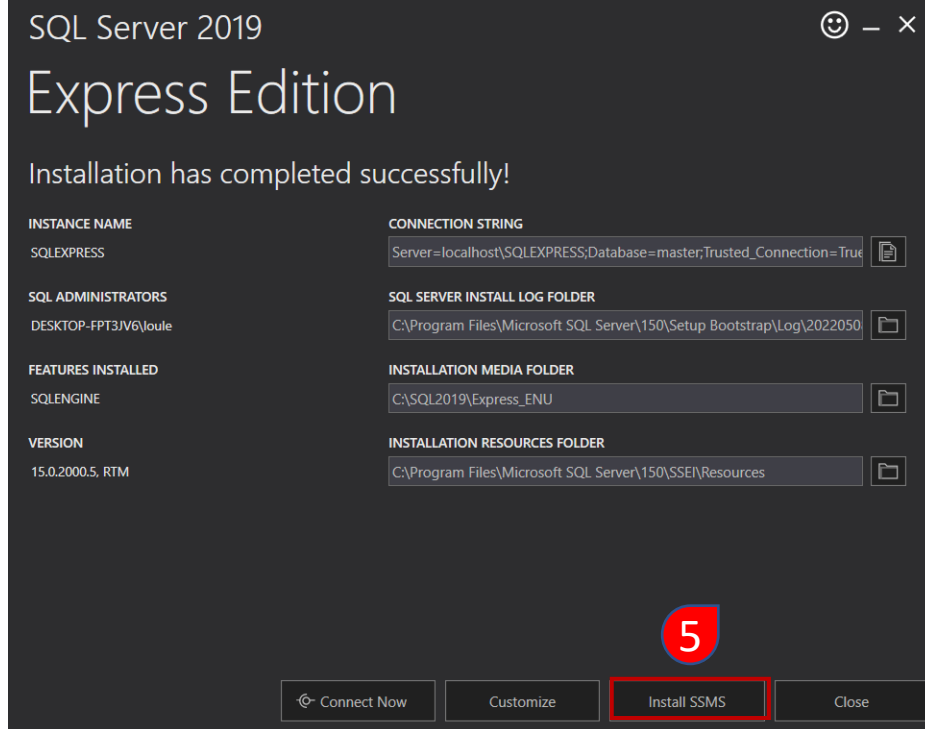

SQL Server & SQL Server Management Studio Installation - Windows

- **Windows:**
 - Use the link below to download Microsoft SQL server:
<https://www.microsoft.com/en-ca/sql-server/sql-server-downloads>
 - Microsoft provides two specialized free SQL download editions to work on MS SQL server:
 - Developer
 - Express
 - Download the **exe** file and follow the installation steps.

and administer instances of SQL Server and databases. Use SSMS to deploy, monitor, and upgrade the data-tier components used by your applications, and build queries and scripts.

Use SSMS to query, design, and manage your databases and data warehouses, wherever they are - on your local computer, or in the cloud.

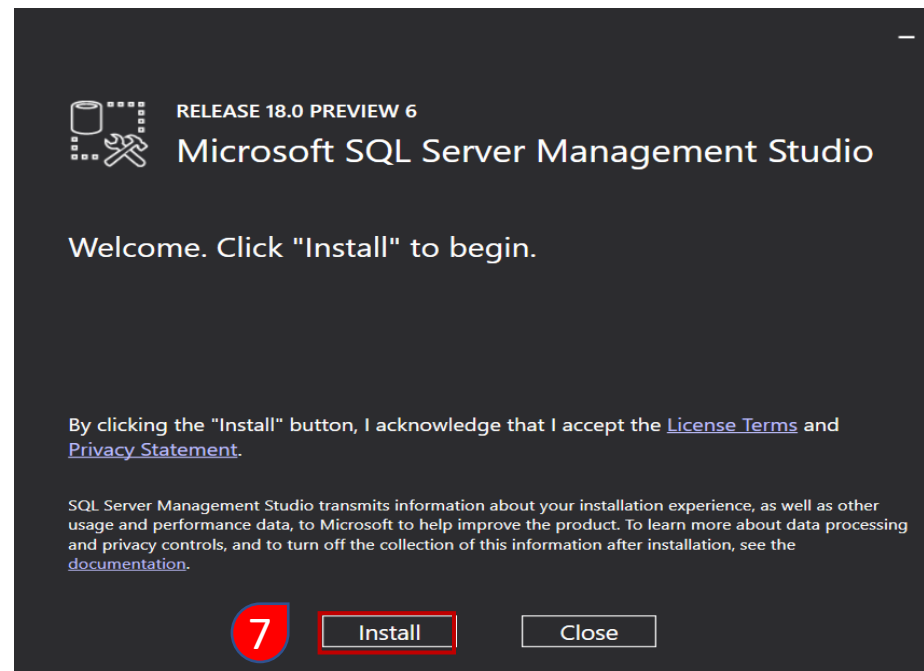

Download SSMS

6

SSMS 18.11 is the latest general availability (GA) version. If you have a previous GA version of SSMS 18 installed, installing SSMS 18.11.1 upgrades it to 18.11.1.

- Release number: 18.11.1
- Build number: 15.0.18410.0
- Release date: March 08, 2022

SQL Server Installation - Mac

- Mac users can install using docker

[Install Docker Desktop on Mac | Docker Documentation](#)

- How to Install MS SQL Server on Mac and Create Databases - Step by Step

[How to Install MS SQL Server on Mac and Create Databases - Step by Step - YouTube](#)

SQL Server Installation - Mac

- Download the Windows SQL Server Image for Docker. Open your CMD, you may need to run it in Admin, and run:

```
docker pull mcr.microsoft.com/mssql/server:2019-latest
```

- Run the command below to create a container with the Windows 2019 server image installed:

```
docker run -e "ACCEPT_EULA=Y" -e "SA_PASSWORD=Password" -p 1433:1433 --name nameDB -d mcr.microsoft.com/mssql/server:2019-latest
```

- Install Azure Data Studio using the link below:

[Download and install Azure Data Studio - Azure Data Studio | Microsoft Docs](#)

- Open Azure Data Studio and select New Connection. Add the server name, username and password.

SQL Server Installation - Linux

- Import the public repository GPG keys:

```
sudo apt-get update  
sudo apt-get -y upgrade
```
- Register the Microsoft SQL Server Ubuntu repository for SQL Server 2019

```
sudo add-apt-repository "$(wget -qO-  
https://packages.microsoft.com/config/ubuntu/20.04/mssql-server-2019.list)"
```
- Run the following commands to install SQL Server:

```
sudo apt update  
sudo apt install mssql-server
```
- After the package installation finishes, run mssql-conf setup and follow the prompts to set the SA password and choose your edition.

```
sudo /opt/mssql/bin/mssql-conf setup
```
- Once the configuration is done, verify that the service is running:

```
systemctl status mssql-server.service
```
- Now install the SQL Server command-line tools. Import the public repository GPG keys.

```
curl https://packages.microsoft.com/keys/microsoft.asc | sudo apt-key add -
```

SQL Server Installation - Linux

- Register the Microsoft Ubuntu repository.

```
curl https://packages.microsoft.com/config/ubuntu/20.04/prod.list |  
sudo tee /etc/apt/sources.list.d/msprod.list
```

- Update the sources list and run the installation command with the unixODBC developer package

```
sudo apt update
```

```
sudo apt-get install mssql-tools unixodbc-dev
```

- Add /opt/mssql-tools/bin/ to your PATH environment variable in a bash shell

```
echo 'export PATH="$PATH:/opt/mssql-tools/bin"' >> ~/.bash_profile
```

```
source ~/.bash_profile
```

```
echo 'export PATH="$PATH:/opt/mssql-tools/bin"' >> ~/.bashrc
```

```
source ~/.bashrc
```

- Connect locally to your new SQL Server instance using the command below:

```
sqlcmd -S localhost -U SA -P '<YourPassword>'
```
